PRODUCT DATASHEET

TAF1-Tndm (His)

CATALOG NO.: RD-11-231 **LOT NO.:**

DESCRIPTION: Human recombinant TAF1-Tndm bromodomain (residues 1373-1635; Genbank Accession # NM_138923; MW = 33.4 kDa) expressed as an N-terminal His-fusion protein in *E. coli*.

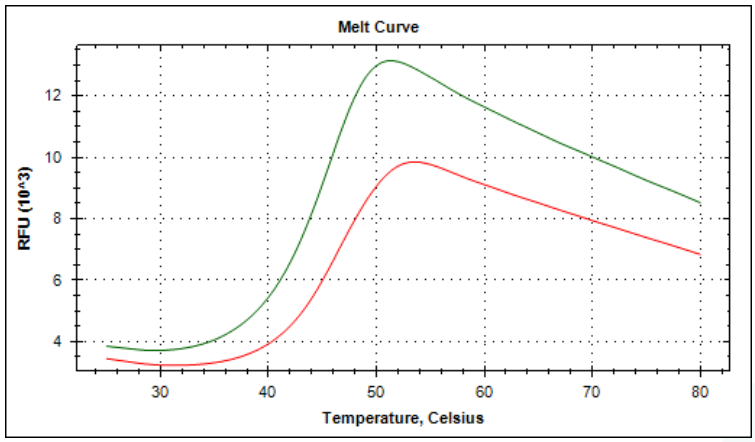

PURITY: >95% by SDS-PAGE

SUPPLIED AS: _ µg/µL in 50 mM Tris HCl, pH 7.5, 500 mM NaCl, 1 mM TCEP, 10 % glycerol

STORAGE: -70°C. Thaw quickly and store on ice before use. The remaining, unused, undiluted protein should be snap frozen, for example in a dry/ice ethanol bath or liquid nitrogen. Minimize freeze/thaws if possible, but very low volume aliquots (<5 µl) or storage of diluted enzyme is not recommended.

Coomassie blue-stained SDS-PAGE (12% acrylamide) of 8 µg of RBC TAF1-Tndm (His). MW markers (left) are, from top, 220, 160, 120, 100, 90, 80, 70, 60, **50**, 40, 30, 25, **20**, 15, 10 kDa.

Differential Scanning Fluorimetry of RBC TAF1-Tndm (His): Thermal denaturation of TAF1-Tndm (His) is detected (CFX384™ Touch thermal cycler, 'FRET' channel; Bio-Rad) by increased binding and fluorescence of the dye SYPRO® Orange (Life Technologies). Addition of 25 µM GSK2801 (red) stabilizes the protein folding and shifts the Tm (inflection point) from 45.5°C to 46.5°C.

This product is not intended for therapeutic or diagnostic use in animals or in humans.
